

INDEX

<i>Al-Janabi, A.S.A.R.</i> : An identification problem of distributed parameter systems	3
<i>Ibrahim R. Ahmed</i> : Spline approximations for system of second order ordinary differential equations	11
<i>Argyros, Ioannis K.</i> : On the convergence of certain iterations to the fixed points of nonlinear operators	21
<i>Chien, Ng. H. and Varga, L.</i> : Algebraic specification of an abstract high-level debugger	33
<i>Dam, B. K.</i> : Connection between the BMO- and the K_{Φ} -spaces	51
<i>Faragó, I. and Galántai A.</i> : An a-stable three-level method for the galerkin solution of quasilinear parabolic problems	67
<i>Fawzy, Th. and Ramadan, Z.</i> : Improved error of an arbitrary order for the approximate solution of system of ordinary differential equations with spline functions	81
<i>Fodor, J. C.</i> : On domain of attraction of the double exponential distribution	99
<i>Fóthi, Á.</i> : A mathematical approach to programming	105
<i>Fullér, R.</i> : On fuzzified linear programming problems	115
<i>Galambos, G.</i> : Notes on lee's harmonic fit algorithm	121
<i>Gyarmati, S. E.</i> : On the discrete Lyapunov problem	127
<i>Hajósy, A.</i> : Numerical integration with linear combination of Chebyshev-Gauss quadratures	134
<i>Hogrefe, D.</i> : Simulation study of the ccs No.7 protokol specification in congested situations	151
<i>József, S.</i> : Über das fuzzy-regressionsproblem	171
<i>Lakatos, L.</i> : On systems with bulk arrival and group service II.	185
<i>Starke, P. H.</i> : Modellierung mit Petri-netzen	201

**ANNALES UNIVERSITATIS SCIENTIARUM
BUDAPESTINENSIS
DE ROLANDO EÖTVÖS NOMINATAE
SECTIO COMPUTATORICA**

Publication. Yearly 1 or 2 issues (about 150 p. each) are scheduled to appear, which are available – mainly through exchange – from the library of the Computing Center of the Eötvös Loránd University Budapest, Bogdánfy u. 10/b.

Editorial Policy. This journal will publish research and, in special cases, survey papers treating problems from a broad field of applied mathematics written with mathematical precision, giving priorities to articles connected with the activities and interests within the departments of applied mathematics of the Eötvös University. The areas of main interest are: classical numerical analysis, modern theories of algorithms of approximation, their optimization both in deterministic and stochastic cases, summation of series, modelling and simulation, mathematical system theory, estimations of computational complexity, theory of automata, languages and systems programming. Reviews of new books, both from and outside Hungary, will be published also.

Instruction for authors. Manuscripts should be submitted in two exemplars or on magnetic discs (using text preparation programs as $\text{T}_{\text{E}}\text{X}$, \LaTeX) – written in English or German, and prepared in form as the ones already appeared – to the editor-in-chief
