<i>Gróf J.</i> : Approximation durch Operatoren vom Szász-Mirakjan-Typ	3
<i>Rafat Riad</i> : Solution of system of high-order differential equations with constant coefficients via block-pulse functions	11
<i>Klafszy E. and Kas P.</i> : A proof of the generalized Hadamard inequality via information theory	21
<i>Szabó T.</i> : Triadditive functions	25
<i>Szidarovszky F. and Okuguchi K.</i> : Some notes on multistep iteration methods	35
<i>Abou El-Ela M.N.</i> : Spline approximation for system of n -th order nonlinear ordinary differential equations III.	47
<i>Kánnai Z.</i> : Viability theorems on strongly sleek tubes	63
<i>Luz Solé</i> : On the existence of maximal input-output systems	77
<i>Doha E.H.</i> : The Chebyshev coefficients of general-order derivatives of an infinitely differentiable function in two or three variables	83
<i>Hassan I.M.</i> : Nonlinear elliptic equations with nonlinear integral condition on the boundary	93
<i>Lénárd M.</i> : Multiple quadrature formulae by splines	109
<i>Borsó Zs.</i> : An analysis of fuzzy preference modelling	121
<i>Kovács B. and Környei I.</i> : On the periodicity of the radix expansion	129
<i>Sztrik J. and Bunday B.D.</i> : An asymptotic approach to the multiple machine interference problem with Markovian environments	135
<i>Bui Minh Phong and Jones J.P.</i> : Quadratic residues and related problems	149

<i>Fawzy Th., Holail F.S. and El-Ganayni W.A.:</i> A spline solution for the (0, m) lacunary interpolation problem	157
<i>Rahman N.A.A.:</i> Approximation of the Schrödinger differential equation by (0, 2)-interpolational spline functions	169
<i>Alvarez E., Benczúr A., Castillo E. and Sarabia J.M.:</i> The problem of learning concepts. A probabilistic view	179
<i>Amedjoe E.O.:</i> Splitting and multisplitting of matrices	195
<i>Granados B.:</i> Walsh wavelets	225
<i>Horváth Z.:</i> On a second order non-negativity conserving method	237

**ANNALES UNIVERSITATIS SCIENTIARUM
BUDAPESTINENSIS
DE ROLANDO EÖTVÖS NOMINATAE
SECTIO COMPUTATORICA**

Publication. Yearly 1 or 2 issues (about 150 p. each) are scheduled to appear, which are available – mainly through exchange – from the library of the Computing Center of the Eötvös Loránd University Budapest, Bogdánfy u. 10/b.

Editorial Policy. This journal will publish research and, in special cases, survey papers treating problems from a broad field of applied mathematics written with mathematical precision, giving priorities to articles connected with the activities and interests within the departments of applied mathematics of the Eötvös University. The areas of main interest are: classical numerical analysis, modern theories of algorithms of approximation, their optimization both in deterministic and stochastic cases, summation of series, modelling and simulation, mathematical system theory, estimations of computational complexity, theory of automata, languages and systems programming. Reviews of new books, both from and outside Hungary, will be published also.

Instruction for authors. Manuscripts should be submitted in two exemplars or on magnetic discs (using text preparation programs as $\text{T}_{\text{E}}\text{X}$, $\text{L}_{\text{A}}\text{T}_{\text{E}}\text{X}$) – written in English or German, and prepared in form as the ones already appeared – to the editor-in-chief

IMRE KÁTAI
