

INDEX

<i>Székelyhidi L.</i> : Difference equations via spectral synthesis	3
<i>Daróczy Z.</i> : On translative and quasi-commutative operations	15
<i>Mauclaire J.-L.</i> : On some multiplicative functions and vector spaces of arithmetic functions	29
<i>Wirsing E.</i> : On a problem of Kátai and Subbarao	69
<i>Ugron B., Kozma L., Hajdara Sz. and Blum L.</i> : Implementations of synchronization of concurrent objects	79
<i>Weisz F.</i> : Marcinkiewicz- Θ -summability of double Fourier series	103
<i>Boros Z. and Kaiser Z.</i> : Note on approximate ring homomorphisms in algebras over fields with valuations	119
<i>Maksa Gy.</i> : CM solutions of some functional equations of associative type	125
<i>Barat G. and Liardet P.</i> : Dynamical systems originated in the Ostrowski alpha-expansion	133
<i>Nguyen Canh Luong</i> : On the class of generalizing differential operators in Clifford algebra	185
<i>Hajdu A., Kormos J., Nagy B. and Zörgő Z.</i> : Choosing appropriate distance measurement in digital image segmentation	193
<i>Indlekofer K.-H. and Klesov O.</i> : The asymptotic behavior of the renewal process constructed from a random walk with a restricted multidimensional time domain	209
<i>Pap M. and Schipp F.</i> : Interpolation by rational functions	223
<i>Járai A.</i> : Regularity of solutions of a functional equation on Lie groups ..	239
<i>Fehér J.</i> : On multiplicative functions satisfying congruence properties II.	247
<i>Lénárd M.</i> : Weighted (0,2)-interpolation with interpolatory boundary conditions	253
<i>Daly J.E. and Fridli S.</i> : H^p multipliers on the dyadic field	275

<i>Tóth L.</i> : On certain arithmetic functions involving exponential divisors ..	285
<i>Bui Minh Phong</i> : On sets characterizing the identity function	295
<i>Szeidl L.</i> : Non-normal limit theorem for a new tail index estimation	307
<i>Lakatos L.</i> : A special cyclic-waiting queueing system with refusals: the discrete time case	323

**ANNALES UNIVERSITATIS SCIENTIARUM
BUDAPESTINENSIS
DE ROLANDO EÖTVÖS NOMINATAE
SECTIO COMPUTATORICA**

Publication. Yearly 1 issue (about 250 pages) is scheduled to appear, which is available from the Department of Computer Algebra of the Eötvös Loránd University, Budapest, XI. Pázmány Péter sét. 1/C.

Editorial policy. This journal publishes research and, in special cases, survey papers treating problems from a broad field of applied mathematics written with mathematical precision, giving priorities to articles connected with the activities and interests within the departments of applied mathematics of the Eötvös University. The areas of main interest are: classical numerical analysis, modern theories of algorithms of approximation, their optimization both in deterministic and stochastic cases, summation of series, modelling and simulation, mathematical system theory, estimations of computational complexity, theory of automata, languages and system programming. Reviews of new books, both from and outside Hungary, will be also published.

Instructions for authors. Manuscripts should be submitted in two exemplars and (parallelly) on magnetic discs (using text preparation programs TEX) - written in English, German or French and prepared in form as the ones already appeared - to the editor-in-chief
