

INDEX OF VOLUME 36

<i>Biczó, M. and Z. Pokoláb: Towards axiom-based test generation in .NET applications</i>	5
<i>Czirbusz, S.: Comparing the computation of Chebyshev polynomials in computer algebra systems</i>	23
<i>Backhausz, Á. and T.F. Móri: A random graph model based on 3-interactions</i>	41
<i>Backhausz, Á. and T.F. Móri: Degree distribution in the lower levels of the uniform recursive tree</i>	53
<i>Dudás, Á., S. Kolumbán and S. Juhász: Performance analysis of multi-threaded locking in bucket hash tables</i>	63
<i>Nagy, G.: Improving efficiency of automated functional testing in agile projects</i>	75
<i>Bukor, J. and J.T. Tóth: On more rapid convergence to a density</i> ..	99
<i>Garda-Mátyás, E. and Z. Makó: The modified joint optimal strategy concept in zero-sum fuzzy matrix games</i>	103
<i>Domoszlai, L. and R. Plasmeijer: Compiling Haskell to JavaScript through Clean's core</i>	117
<i>Csiszár, V.: EM algorithms for generalized Bradley–Terry models</i> ..	143
<i>Kézdí, N., K. Pásztor Varga and É. Jakó: Neighborhood principle driven ICF algorithm and graph distance calculations</i>	159
<i>Juhász, D. and T. Kozsik: Superoptimization in LLVM</i>	179
<i>Kovács, E. and T. Szántai: A probabilistic classification method based on conditional independences</i>	201
<i>Leskó, D. and M. Tejffel: A domain based new code coverage metric and a related automated test data generation method</i>	217
<i>Lócsi, L.: Rational FFT implementation in MATLAB</i>	241

<i>Molnar, A.-J.</i> : A heuristic process for GUI widget matching across application versions	255
<i>Dévai, G.</i> : Extended pattern matching for embedded languages	277
<i>Pintér, B., Gy. Vörös, Z. Szabó and A. Lőrincz</i> : Automated word puzzle generation using topic models and semantic relatedness measures	299
<i>Orbán, Gy. and L. Kozma</i> : Defining contracts with different tools in software development	323
<i>Pataki, N.</i> : Compile-time advances of the C++ Standard Template Library	341
<i>Chakraborty, K., I. Kátai and B.M. Phong</i> : On real valued additive functions modulo 1	355

ANNALES UNIVERSITATIS SCIENTIARUM
BUDAPESTINENSIS
DE ROLANDO EÖTVÖS NOMINATAE
SECTIO COMPUTATORICA

Publication. Yearly 2 issues are scheduled to appear, which are available from the Department of Computer Algebra of the Eötvös Loránd University, Budapest, XI. Pázmány Péter sét. 1/C.

Editorial policy. This journal publishes research and, in special cases, survey papers treating problems from a broad field of applied mathematics and computer science written with mathematical precision, giving priorities to articles connected with the activities and interests within the departments of applied mathematics and computer science of the Eötvös University. The areas of main interest are: classical numerical analysis, modern theories of algorithms of approximation, their optimization both in deterministic and stochastic cases, summation of series, modelling and simulation, mathematical system theory, estimations of computational complexity, theory of automata, languages and system programming. Reviews of new books, both from and outside Hungary, will be also published.

Instructions for authors. Manuscripts should be submitted in two exemplars or in electronic form (the TEX and PDF files) - written in English, German or French and prepared in form as the ones already appeared - to the editor-in-chief
