INDEX OF VOLUME 37

Giachetta, R., T. Gregorics, Z. Istenes and S. Sike: Address standardization 5

Zsók, V. and Z. Porkoláb: Rapid prototyping for distributed D-Clean using C++ templates 19

Weisz, F.: Cesàro-summability of higher-dimensional Fourier series 47

Agócs, Á., Z. Ács, A. Balaton and T. Lukovszki: Toward a faster BiTTorrent 65

Bánsághi, A., B.G. Ézsiás, A. Kovács and A. Tátrai: Source code scanners in software quality management and connections to international standards 81

Burcsi, P.: The commuter's paradox: why it takes longer to get home than to get to work 93

Dezső, B., I. Fekete, D. Gera, R. Giachetta and I. László: Object-based image analysis in remote sensing applications using various segmentation techniques 103

Fogarasi, N. and J. Levendovszky: Improved parameter estimation and simple trading algorithm for sparse, mean-reverting portfolios 121

Fridli, S., P. Kovács, L. Lócsi and F. Schipp: Rational modeling of multi-lead QRS complexes in ECG signals 145

Góbi, A., Z. Szűgyi and T. Kozsik: A C++ pearl – self-referring streams 157

Hatwágner, M.F. and A. Horváth: Maintaining genetic diversity in bacterial evolutionary algorithm 175

Iványi, A.: Degree sequences of multigraphs 195

Iványi A., S. Pirzada and N.A. Shah: Imbalances of bipartite multitournaments 215

Kádek, T.: Press-ready deduction trees in classical logic using point-plus-expressions 229

Király, B.: Generalized Haar-Fourier transform 239

Kovács, P.: ECG signal generator based on geometrical features 247

Kupán, P.A. and R. Szász: About a condition for starlinkeness 261

Máriás, Zs., T. Nikovits, T. Takács and R. Giachetta: A study of storing large amount of inhomogeneous data in workflow management systems 275

Németh, Zs.: Some classes of uniformly convergent interpolation processes on the roots of Chebyshev polynomials 293

Páli, G.: Declarative scheduling of dataflow networks 311

Robu, J. and A. Soós: Approximation of stochastic differential equations driven by step fractional Brownian motion 339

Tejfel, M., M. Tóth, I. Bozó, D. Horpácsi and Z. Horváth: Improving quality of software analyser and transformer tools using specification based testing 355

ANNALES UNIVERSITATIS SCIENTIARUM BUDAPESTINENSIS DE ROLANDO EÖTVÖS NOMINATAE SECTIO COMPUTATORICA

Publication. Yearly 2 issues are scheduled to appear, which are available from the Department of Computer Algebra of the Eötvös Loránd University, Budapest, XI. Pázmány Péter sét. 1/C.

Editorial policy. This journal publishes research and, in special cases, survey papers treating problems from a broad field of applied mathematics and computer science written with mathematical precision, giving priorities to articles connected with the activities and interests within the departments of applied mathematics and computer science of the Eötvös University. The areas of main interest are: classical numerical analysis, modern theories of algorithms of approximation, their optimization both in deterministic and stochastic cases, summation of series, modelling and simulation, mathematical system theory, estimations of computational complexity, theory of automata, languages and system programming. Reviews of new books, both from and outside Hungary, will be also published.

Instructions for authors. Manuscripts should be submitted in two exemplars or in electronic form (the TEX and PDF files) - written in English, German or French and prepared in form as the ones already appeared - to the editor-in-chief
