INDEX OF VOLUME 45

Congratulation 3

Guven, A. and H. Yurt: Approximation theorems in L^p spaces of functions of several variables 5

Tuan, P.D. and N.T. Quang: Differential polynomials and value-sharing 23

Kovács, Á.M. and H.M. Taylor: Competing risks Weibull model: parameter estimates and their accuracy 45

Tran, M.-P. and T.-N. Nguyen: A simple algorithm for Schwarz waveform relaxation methods 57

De Koninck, J.-M. and I. Kátai: On convoluted sums 75

De Koninck, J.-M. and I. Kátai: On the k-fold iterates of the Euler totient function at shifted primes 89

De Koninck, J.-M. and I. Kátai: Iterates of the sum of the unitary divisors of an integer 101

Székelyhidi, L. and L. Vajday: Spectral synthesis on commutative hypergroups 111

Takács, B.: Analysis of some characteristic parameters in an invasive species model 119

Farkas, Z.: Development and mathematical analysis of a space-dependent integro-differential model for the spread of Ebola by using operator splitting 135

Faragó, I. and R. Horváth: Qualitative properties of the finite difference solution of a space-time epidemic propagation model 157

Svantnerné Sebestyén, G.: Modelling the ecosystem of the Easter Island with delay differential equations 169

Simon, L. and A. Soós: Limit sets of graph-driven iterated (multi)function systems 183

Phong, B.M.: Additive uniqueness sets for a pair of multiplicative functions 199

Khanh, B.M.M.: Characterization of arithmetical functions with functional equation 223

Kallós, G.: On some problems of expansions investigated by P. Erdős et al. 239

Indlekofer, K.-H., I. Kátai and B.M. Phong: Multiplicative functions with small increment I. 261

Indlekofer, K.-H., I. Kátai and B.M. Phong: Multiplicative functions with small increment II. 269

Weisz, F.: Some generalizations of Lebesgue's theorem for two-dimensional functions 277

Argyros, I.K. and S. George: Ball convergence of an iterative method for nonlinear equations based on the decomposition technique under weak conditions 291

Hegedüs, Cs.J.: The method IRLS for some best ℓ_p norm solutions of under- or overdetermined linear systems 303

Lan, L.V.T, N.M. Han and N.C. Hao: An algorithm to building a fuzzy decision tree for data classification problem based on the fuzziness intervals matching 319
