INDEX OF VOLUME 46

Burcsi, P.: To the memory of Professor Antal Iványi ................. 5
List of publications of Antal Iványi ................................. 7
De Koninck, J.-M. and I. Kátai: Normal numbers in generalized
number systems in Euclidean spaces ............................... 15
De Koninck, J.-M. and I. Kátai: On the distribution of the
number of prime factors of the $k$-fold iterate of various
arithmetic functions ............................................. 27
Farkas, G. and Zs. Juhász: A generalization of Goldbach’s
conjecture .......................................................... 39
Gonda, J.: On the variables of the conjunctively polynomial-like
Boolean functions .................................................. 55
Hajas, Cs. and A. Zempléni: Chess and bridge clustering
the countries .......................................................... 67
Hudoba, P. and A. Kovács: Some improvements on number
expansion computations ........................................... 81
Kallós, G.: Supplement to paper "On some problems of expansions
investigated by P. Erdős et al" .................................. 97
Kátai, I. and B.M. Phong: Multiplicative functions with
small increments ..................................................... 105
Kátai, I. and B.M. Phong: On the equation $f(n^2) = g^2(n)$
for $q$-additive functions $f$ and $g$ ................................. 115
Khanh, B.M.M.: On conjecture concerning the functional equation .. 123
Kornyik, M. and Gy. Michaletzky: On the moments of roots
of Laguerre-polynomials and the Marchenko-Pastur law ........ 137
Krutki, T. and G. Nagy: On simultaneous number systems
with 3 bases ......................................................... 153
László, L.: An inequality and some equalities for the midradius
of a tetrahedron ..................................................... 165
Lócsi, L. and F. Schipp: Rational Zernike functions .......................... 177
Móri, T.F. and S. Rokob: A random graph model driven by time-dependent branching dynamics ...................... 191
Németh, Zs.: On optimal unit fraction bin packing .............. 215
Phong, B.M.: A multiplicative function with equation $f(p + m^3) = f(p) + f(m^3)$ ........................................ 223
Radova, A. and S. Varbanets: On exponential sums involving the divisor function over $\mathbb{Z}[i]$ .......................... 235
Román, G.: Primality proofs with elliptic curves: expected number of curve orders ....................................... 247
Varbanets, P. and S. Varbanets: Inversive generator of the second order with a variable shift for the sequence of PRN’s ............ 255
Akın, A. and A. Tekcan: The integer sequence $a_n$ and its relationship with Pell, Pell–Lucas and balancing numbers .................. 275
Vu Hoai An and Pham Ngoc Hoa: On the uniqueness problem of non-Archimedean meromorphic functions and their differential polynomials .................................................. 289
Akın, A. and A. Tekcan: The Pell equation $x^2 - (k^2 - 2)y^2 = 1$ and the corresponding integer sequence ......................... 303
Tran Nam Sinh and Phan Van Thien: Segre’s upper bound for the regularity index of $2n + 2$ non-degenerate double points in $\mathbb{P}^n$ .............................................................. 327
Argyros, I.K., P.K. Parida and Salahuddin: Ball convergence of an efficient fifth order iterative methods under weak conditions .......................................................... 341
Argyros, I.K. and S. Georg: Improved convergence conditions of a Lavrentiev-type method for nonlinear ill-posed equations by using restricted convergence domains ......................... 355

UNSOVED PROBLEMS SECTION

Kátai, I. and B.M. Phong: Characterization of some multiplicative functions ...................................................... 373
