

## INDEX OF VOLUME 36

|                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Biczó, M. and Z. Pokoláb</i> : Towards axiom-based test generation<br>in .NET applications .....                                   | 5   |
| <i>Czirbusz, S.</i> : Comparing the computation of Chebyshev polynomials<br>in computer algebra systems .....                         | 23  |
| <i>Backhausz, Á. and T.F. Móri</i> : A random graph model based<br>on 3-interactions .....                                            | 41  |
| <i>Backhausz, Á. and T.F. Móri</i> : Degree distribution in the lower levels<br>of the uniform recursive tree .....                   | 53  |
| <i>Dudás, Á., S. Kolumbán and S. Juhász</i> : Performance analysis of<br>multi-threaded locking in bucket hash tables .....           | 63  |
| <i>Nagy, G.</i> : Improving efficiency of automated functional testing<br>in agile projects .....                                     | 75  |
| <i>Bukor, J. and J.T. Tóth</i> : On more rapid convergence to a density ..                                                            | 99  |
| <i>Garda-Mátyás, E. and Z. Makó</i> : The modified joint optimal strategy<br>concept in zero-sum fuzzy matrix games .....             | 103 |
| <i>Domoszlai, L. and R. Plasmeijer</i> : Compiling Haskell to JavaScript<br>through Clean's core .....                                | 117 |
| <i>Csiszár, V.</i> : EM algorithms for generalized Bradley–Terry models ..                                                            | 143 |
| <i>Kézdi, N., K. Pásztor Varga and É. Jakó</i> : Neighborhood principle<br>driven ICF algorithm and graph distance calculations ..... | 159 |
| <i>Juhász, D. and T. Kozsik</i> : Superoptimization in LLVM .....                                                                     | 179 |
| <i>Kovács, E. and T. Szántai</i> : A probabilistic classification method<br>based on conditional independences .....                  | 201 |
| <i>Leskó, D. and M. Tejfel</i> : A domain based new code coverage metric<br>and a related automated test data generation method ..... | 217 |
| <i>Lócsi, L.</i> : Rational FFT implementation in MATLAB .....                                                                        | 241 |

---

|                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Molnar, A.-J.:</i> A heuristic process for GUI widget matching<br>across application versions .....                                                   | 255 |
| <i>Dévai, G.:</i> Extended pattern matching for embedded languages .....                                                                                 | 277 |
| <i>Pintér, B., Gy. Vörös, Z. Szabó and A. Lőrincz:</i> Automated<br>word puzzle generation using topic models and semantic<br>relatedness measures ..... | 299 |
| <i>Orbán, Gy. and L. Kozma:</i> Defining contracts with different tools<br>in software development .....                                                 | 323 |
| <i>Pataki, N.:</i> Compile-time advances of the C++ Standard Template<br>Library .....                                                                   | 341 |
| <i>Chakraborty, K., I. Káta and B.M. Phong:</i> On real valued additive<br>functions modulo 1 .....                                                      | 355 |
