

## INDEX OF VOLUME 39

|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Kátai, I.</i> : Laudation to Professor Karl-Heinz Indlekofer<br>on his seventieth anniversary .....                                                          | 7   |
| List of publications II. of Karl-Heinz Indlekofer .....                                                                                                         | 13  |
| <i>Barát, A. and E. Kaya</i> : On the models of Indlekofer and Kubilius<br>in probabilistic number theory .....                                                 | 17  |
| <i>Bareikis, G. and A. Mačiulis</i> : On the number of divisors<br>in arithmetical semigroups .....                                                             | 35  |
| <i>De Koninck, J.-M. and I. Kátai</i> : Using large prime divisors<br>to construct normal numbers .....                                                         | 45  |
| <i>Fridli, S., Z. Gilián and F. Schipp</i> : Rational biorthogonal systems<br>on the plane .....                                                                | 63  |
| <i>Gát, Gy.</i> : Almost everywhere convergence of sequences of<br>two-dimensional Vilenkin–Fejér means<br>of integrable functions .....                        | 79  |
| <i>Gut, A. and J. Steinebach</i> : Convergence rates in precise<br>asymptotics II .....                                                                         | 95  |
| <i>Hampejs, M. and L. Tóth</i> : On the subgroups of finite Abelian<br>groups of rank three .....                                                               | 111 |
| <i>Harutyunyan, A. and W. Lusky</i> : A remark on the isomorphic<br>classification of weighted spaces of homolorphic functions<br>on the upper half plane ..... | 125 |
| <i>Iliencko, A.</i> : Continuous counterparts of Poisson and binomial<br>distributions and their properties .....                                               | 137 |
| <i>Indlekofer, K.M. and J.M. Castelo Area</i> : On the correlation<br>entropy of discrete nanoelectronic systems .....                                          | 149 |
| <i>Indlekofer, T.</i> : Signature rollback with extreme compaction –<br>A technique for testing robust VLSI circuits with reduced<br>hardware overhead .....    | 161 |
| <i>Iványi, A. and Z. Kása</i> : Prism complexity of matrices .....                                                                                              | 181 |
| <i>Janulis, K. and A. Laurinćikas</i> : Joint universality of Dirichlet<br>$L$ -functions and Hurwitz zeta-functions .....                                      | 203 |

|                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Jäger-Ambrożewicz, M.:</i> Closed form solutions of measures<br>of systemic risk .....                                                  | 215 |
| <i>Kargina, T. and E. Manstavičius:</i> The law of large numbers<br>with respect to ewens probability .....                                | 227 |
| <i>Kátaí, I.:</i> Some remarks on a result of Timofeev and Khripunova ...                                                                  | 239 |
| <i>Kaya, E., M. Kucukaslan and R. Wagner:</i> On statistical<br>convergence and statistical monotonicity .....                             | 257 |
| <i>Klesov, O.I. and U. Stadtmüller:</i> Existence of moments<br>in the Hsu–Robbins–Erdős theorem .....                                     | 271 |
| <i>Kovács, A.:</i> Algorithmic construction of simultaneous number<br>system in the lattice of Gaussian integers .....                     | 279 |
| <i>Lajkó, K. and F. Mészáros:</i> General solution of a functional equation<br>arisen from characterization problems .....                 | 291 |
| <i>Luh, W.:</i> Power series – the structure of H.–O.-gaps .....                                                                           | 303 |
| <i>Mauclaire, J.-L.:</i> Universality of the Riemann zeta function:<br>two remarks .....                                                   | 311 |
| <i>Oswald, N. and J. Steuding:</i> Sums of continued fractions<br>to the nearest integer .....                                             | 321 |
| <i>Pap, M.:</i> Multiresolution in the Bergman space .....                                                                                 | 333 |
| <i>Phong, B.M.:</i> On additive functions with values<br>in Abelian groups .....                                                           | 355 |
| <i>Runovska, M.K.:</i> Strong law of large numbers for scalar-normed sums<br>of elements of regressive sequences of random variables ..... | 365 |
| <i>Simon, I.:</i> On transformations by dyadic martingale structure<br>preserving functions .....                                          | 381 |
| <i>Simon, P.:</i> On a theorem of Feichtinger and Weisz .....                                                                              | 391 |
| <i>Stakėnas, V.:</i> On the uniformity of some sequences<br>of rational numbers .....                                                      | 405 |
| <i>Stoyan, G.:</i> On a numerical model for the pianoforte .....                                                                           | 415 |
| <i>Székelyhidi, L.:</i> Spectral synthesis problems on hypergroups .....                                                                   | 439 |
| <i>Wagner, R.:</i> Über den Zusammenhang zwischen Funktionenalgebren<br>von Zahlentheoretischen Funktionen und Mengenalgebren ....         | 449 |
| <i>Wen-Bin Zhang (Chung Man Ping):</i> Normalization of Beurling<br>generalized primes with Riemann Hypothesis .....                       | 459 |
